

Value-based Medications

Not related to health care reform

www.asuris.com

Did you know that you can reduce illness, symptoms and improve your overall health by taking value-based medications? We want to make getting medications for asthma, diabetes, high blood pressure, high cholesterol and smoking cessation easier for you.

For Asuris members who have a value-based or rewards-based medication benefit, here is a list of generic (in lower case bold) and formulary brand medications that may not be subject to specific out-of-pocket costs. To ensure preventive pharmacy benefits apply, members should check with their benefits administrator or benefit booklet.

Accolate [®]	Lantus [®]
Actos [®]	Levemir [®]
Advair [®]	lisinopril (Prinivil [®])

Humulin [®]	

Disclaimer:

This list does not pertain to provisions of federal health care reform, the Patient Protection and Affordable Care Act. The above list provides examples of medications that may be included with value-based or rewards-based medication benefits. The list is not all inclusive and is subject to change. New generics may become available. In rare instances, a generic may no longer be manufactured or is withdrawn from the market. While market withdrawal of a generic is very rare, please note that the medication would no longer be available at a waived deductible.
