

April 3, 2006

Dear Physician,

RegenceRx is pleased to announce a new partnership with McKesson Specialty Pharmacy Services that will facilitate lower spending on specialty and biotech injectable medications, as well as provide a higher level of service and care for our members. With nearly 800 drugs in the biotech pipeline and a growth rate of 22.5 percent in 2005, specialty medications are the fastest growing pharmaceutical market segment.

Under the three-year, renewable agreement, McKesson Specialty will facilitate the cost-effective procurement and dispensing of specialty pharmaceuticals to improve care for health plan members with chronic or complex medical conditions such as hepatitis C, multiple sclerosis, rheumatoid arthritis and cancer. Program implementation will be completed by May 1, 2006. Beginning on that date, all members currently using CuraScript will have their prescriptions transferred to McKesson Specialty by CuraScript Pharmacy. McKesson will be working directly with the affected members and you, their physician.

You will also be able to order specialty and injectable medications, on a per patient basis, for delivery to your office, or directly to the patient in the case of self-injectables. The new service can alleviate the burden of stocking expensive injectable medications.

McKesson Specialty is a part of the McKesson Corporation, Their reach of capabilities, coupled with one of the largest customer bases enables McKesson Specialty to reduce costs while optimizing products and services.

The benefits of the program include:

- Coordination of patient's pharmacy and medical benefits
- Convenience – delivery of injectable prescriptions directly to the patient or physician's office.
- 24-hour patient access to pharmacists and nurses for medication counseling
- Automatic coordination of refills

For further information on the benefits of this program, please contact McKesson Specialty at 1-888-456-7274, or your Provider Relations representative.

Sincerely,

RegenceRx
